

Your simple home audio network

Music throughout the entire house

Supports most audio file formats

## dLAN<sup>®</sup> Audio extender

- HomePlug adapter for audio transmission over the household power circuit
- Listen to audio files from the PC via your HiFi entertainment system or active speakers
- The ideal supplement to an existing dLAN HomePlug network

**NEW!**

### Music throughout the entire house

You're a music lover and you want to listen to your favourite tracks anywhere in the house? Then the dLAN Audio extender is for you. This device distributes music from your PC throughout your house via the power circuit.

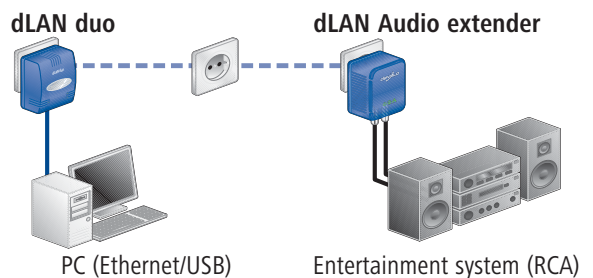

Naturally, you aren't restricted to just music—you can enjoy your audio collection anywhere in the house at top CD quality—in your living room, kitchen, bathroom, or even out on the patio.

### Your audio network

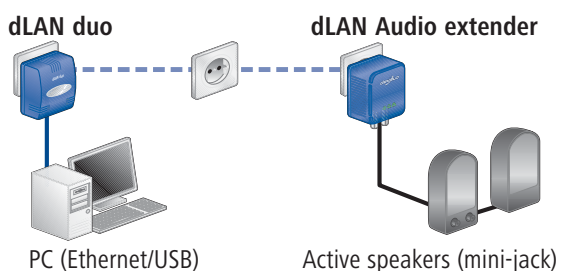

With the dLAN Audio extender you can set up your own audio network using the existing electrical wiring in your home! Music in the living room, audiobooks in the kitchen, podcasts in the kids' rooms—you can do it all with the dLAN Audio extender. This HomePlug adapter gives you the greatest possible flexibility in choosing your location. All you need to connect your PC or server is one dLAN duo HomePlug adapter.

(The dLAN Audio extender Starter Kit already contains both adapters.)

#### Transferring audio files from your PC to your HiFi entertainment system

#### Transferring audio files from your PC to active speakers

# dLAN® Audio extender

## Listen to audio files from the PC via your HiFi entertainment system

The dLAN Audio extender enhances your dLAN HomePlug network for a wide variety of audio applications. You can now keep your favourite tracks on a music server and play them on your HiFi system anywhere within range of your household mains circuit. Naturally, the PC or server with

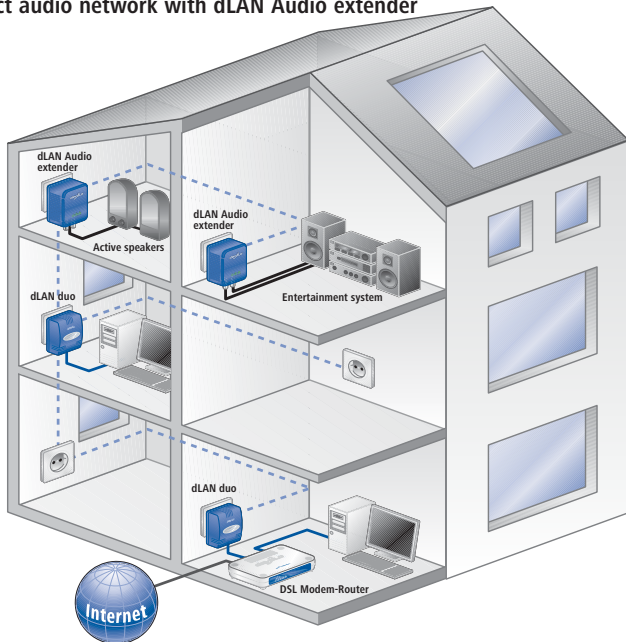

your digital music archive must be integrated within the network. Simply plug the dLAN duo HomePlug adapter (included in the Starter Kit) into a free power socket and connect it to the PC using either an Ethernet or USB cable.

## Listen to audio files from the PC via the active speakers

The dLAN Audio extender also provides music or other audio files from a central PC or music server to your active speakers via your household mains

circuit. Take advantage of even greater flexibility and enjoy your music or audiobooks in any room using your active speakers.

## The perfect audio network with dLAN Audio extender

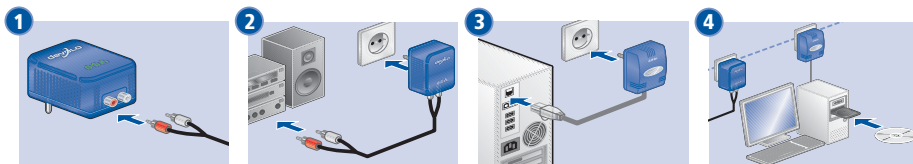

## Connecting the dLAN Audio extender

**1.** Unpack the dLAN Audio extender, plug the stereo RCA cable into it and  
**2.** Plug the device into a free power socket next to your HiFi system. Use the RCA cable to connect the adapter to your HiFi. Additionally, your dLAN Audio extender supports active speakers—simply use a mini-jack cable to connect them to the adapter.

**3.** Plug the dLAN duo into a free power socket next to your PC and connect the adapter to the PC using an Ethernet or USB cable.

**4.** Insert the included CD into your PC and install the software. This will take less than a minute. Once the installation is complete, you can use the application immediately. Play your tracks on the PC and listen to them on the speakers of your desired HiFi system or active speaker set.
