

Training sessions for dLAN® Business Solutions

Professional networking solutions via existing cable networks

Target group The training session is intended for IT and networking companies as well as installation companies who have little practical experience with data communication over antenna cables (coax) and/or power lines.

Prerequisites Basic knowledge: network technology and general technical understanding

Training objectives After the training session, you will be able to review the feasibility of projects that use devolo dLAN® technology, plan and execute them independently, and select the optimal product for the respective project.

Training content

- Basics of coax networks and power grids
- devolo technologies on these transmission media
- Illustration of various network requirements with suitable solution approaches taking into account an optimal cost/revenue relationship
- Successful project acquisition in these target markets: cable network operators, housing industry, hospitality
- Evaluating, planning and implementing projects on coax
- Selecting the optimum products
- Practical workshops on antenna cables and power lines

Length 1 Day

dLAN® 200 AVpro host

dLAN® 200 AVpro2

dLAN® 200 AVpro WP
